Buccal
Of the cheeks

Buccal Shield
Also called the labial shield. Term refers to the continuous roll of material on the outer edge of the biting surface of the mouthguard. This shield overhangs the edge by about 3mm and works in conjunction with the flat occlusal table it surrounds to significantly reduce the number of lower jaw fractures.

[back to top...](#)

Chromium cobalt
A generic term used to describe a class of metal alloy used commonly to make cast metal framework dentures.

[back to top...](#)

GEL
Term used by Signature Mouthguards to describe the intimate customising material available with the Signature Type 3 ProPlusGel Mouthguards. This GEL is a special addition silicone material.

United States Patent No. 4,725,228

As in the first embodiment, the forward ends 41, 42 of the locator arms define a gap which the orthodontist adjusts to height of the tooth crown. Unlike the first embodiment, however, the upper locator arm terminates in a flat plate 43. This serves as an occlusal table to be placed on the biting edge of the tooth, thereby facilitating the placement of the instrument and improving the accuracy of the measurement. This also permits the
